

#polarizer

Circular Polarizer with high extinction ratio

Description

Circular True-Pol® reduces glares and unwanted reflections, improves contrast, penetrates haze at long distances, deepens blue skies, and helps to maintain color saturation. An additional 1/4 wave retarder film ensures that Circular True-Pol® filters also work with beamsplitting and autofocus systems.

Application

With their absolute clarity of the glass and advanced polarizing material, True-Pol® filters are particularly effective on demanding scenes, e.g. when shooting in a car through windshields or big landscape environments.

Key Features

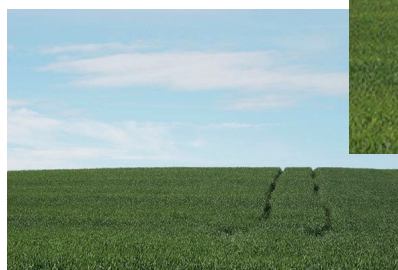

- High extinction ratio
- Reduces glares, haze and unwanted reflections
- Provides saturated colors and improves contrast
- Also works with beamsplitting and autofocus systems
